Naylor Specialist Plastics Flexible Ducting

Naylor is a fourth generation business based in Barnsley, South Yorkshire: the company has manufactured pipes in clay and latterly also in plastic since its formation in 1890. Naylor's Specialist Plastics division, based in the Midlands, extrudes plastic tubes and profiles in a wide range of materials and colours for a broad range of sectors and application including dewatering, ground stabilisation and packaging tubes. Naylor Specialist Plastics is a long-

established and similarly diverse manufacturer of plastic extrusions and flexible ducting supplying a wide range of sectors including the leisure, cable, flooring, DIY, mining and tunnelling sectors. The company was initially set up to supply ventilation ducting to the domestic mining and tunnelling industries and this activity continues today, with its flexible duct products being used in air conditioning, the extraction of hazardous materials and

portable heating devices. Recent decades have seen Naylor Specialist Plastics diversify into plastic extrusions, and the company now has 9 extrusions lines offering both rigid and flexible tubes and profiles including cable fillers and floor profiles. The company also has a comprehensive fabrications department which offers laminating, slotting and abrasive surface treatment services.

PORTABLE HEATING

Products that can combine high temperature resistant materials such as silicone and hypalon with pvc to product composite ducts which are the perfect product for connection directly onto portable heaters while at the same time keeping cost to a minimum. Double skin insulated ducts can also be made which reduce heat loss on the duct run from the heater to the point of entry into the space to be heated.

COOLING & AIRCONDITIONING

Our ducting can be supplied in 'lay flat' form, with air escape holes to provide evenly distributed air flows in marquees, other even or semi-permanent structures, where warm or cool air is required. We are the sole supplier of M1 flame retardant material in the UK for this purpose. Ducting can be supplied in a variety of colours and grades of material to suit customer's exact requirements in terms of product life, pressure, suction and durability.

EVENTS DUCTING

Our products can supply all your needs to event ducting. High temperature ducts to connect to heaters for warm air and heavy duty pvc ducting for feeds into marquees and exhibition halls. Wire reinforced of lay flat ducting with air distribution outlets can be connected to the feed ducting for a balanced flow or warm air or air conditioned air throughout the event.
